DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/29/03 has been entered.

Specification

2. The disclosure is objected to because of the following informalities:

On page 7 (line 18), it appears that the phrase "Fig. 10" should instead read as --Fig. 1-- since the MIM capacitance is connected to point A in Fig. 1 rather than the prior art Fig. 10A.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 13-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claims contain subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed,

Art Unit: 2817

had possession of the claimed invention. Present Claims 13 and 15 include the phrase "an open stub capacitance connected to the" input line or output line ... "and including part of the insulating film as a dielectric". This appears to be new matter which was not described in the original disclosure, especially since the original specification (page 8, lines 9-11, and page 10, lines 31-32) teaches that the open stub capacity L1 "does not depend on the MIM insulation film thickness L" and thus the specification appears to be describing the relationship of the stub and film in a contradictory manner to the present claims.

Any arguments regarding this new matter rejection should include the location in the original disclosure where the enabling subject matter can be found.

Also, although it is not clear to the examiner, it appears (based on the specification) that the invention is drawn to a stub capacitance that is independent of the insulation film, and the MIM capacitance and transistor are dependent on the insulation film in an inverse manner.
